

CLAIM SET AS AMENDED

① 1. (Currently Amended) An electro-luminescence display, comprising:
an electro-luminescence panel having a display area and a non-display
area;

driving circuit boards for applying driving signals to a gate line and a
data line provided on a surface of the electro-luminescence panel; and

Cmt
11 1. (Original) The electro-luminescence display according to claim 1,
wherein the driving circuit boards include:
a gate driving circuit for applying driving signals to the gate lines; and
a data driving circuit for applying driving signals to the data lines.

4 3. (Original) The electro-luminescence display according to claim 1,
wherein the driving circuit boards include a plurality of output pads electrically
connected to the tape carrier packages.

5 4. (Original) The electro-luminescence display according to claim 3,
wherein the electro-luminescence panel includes a plurality of input pads that
are provided at the non-display area and electrically connected to the tape
carrier packages.

6 5. (Original) The electro-luminescence display according to claim 4,
wherein each of the tape carrier packages includes:

B first pads connected to the output pads of the driving circuit boards; and
CMT 3 second pads connected to the input pads of the electro-luminescence
display.

6 6. (Original) The electro-luminescence display according to claim 2,
wherein the tape carrier packages include:

a first group of tape carrier packages arranged between the electro-
luminescence panel and the gate driving circuit; and
a second group of tape carrier packages arranged between the electro-
luminescence panel and the data driving circuit.

7 7. (Original) The electro-luminescence display according to claim 1,
wherein each of the tape carrier packages has a first side for connecting the
driving circuit boards to the electro-luminescence panel and a second side for

holding a computer chip.

8. (Original) The electro-luminescence display according to claim 7,
wherein a substantial portion of each of said tape carrier packages is in a
common plane with said driving circuit boards.

D

9. (Original) The electro-luminescence display according to claim 7,
wherein a substantial portion of each of said tape carrier packages having a
first portion disposed in a common plane with said driving circuit boards and
connected to the electro-luminescence panel.

10. (Original) The electro-luminescence display according to claim 9,
wherein each of said tape carrier packages has a second portion disposed in a
contiguous plane to the common plane of said electro-luminescence panel and
said first portion.
